

Pictures of Anti-fog Level

**E**

## Test method of Anti-fog level

### 1. cold anti-fog test

Put 200ml 20°C water in a 250ml beaker, make the tested film on the top of the breaker. And then put it into a refrigerator of 4°C, observe the performance of the film and evaluate the anti-fog level. The test will last for one week.

### 2. Hot anti-fog test

Put 50ml water in a 250ml beaker, make the tested film on the top of the breaker. And then put the breaker in a 60°C water batch, observe the performance of the film and evaluate the anti-fog level. The test will last for three hours.
